# 1971 Article Index

## General Works On Systems and Data Processing

**Analyst, Analyst, Will The Real Analyst Please Stand Up?**
The systems analyst, in the true sense of the word, does not exist, according to the author, who gives his description of today's analyst. (Oct.)
**Frank J. Schreier**

**Career Paths In Systems And Data Processing**
The author discusses some of the obstacles that lie in the path of the systems professional on his road to top management of a company. (June)
**Donald Kaye**

**Environmental Problem Solving**
The author discusses complex problem solving and how the solutions to many individual problems relate to environmental problems. (Oct.)
**William T. Meyer**

**Systems Approach To Water Pollution Abatement**
A systems approach to the problem of water pollution may be just the solution to good stream quality at a moderate cost. (Mar.)
**Austin H. Montgomery**

**Toward A Systems Theory Of The Firm**
To develop a systems theory of the firm, managers first must identify the boundaries and restraints imposed upon the firm. (Feb.)
**August William Smith**

**What A Difference A Decade Makes**
The author takes a speculative look at the systems and data processing areas of a hypothetical company today and as they were in 1961. (Sept.)
**Robert V. Head**

## Managing the Systems Effort

**Building Block Approach: Key To Federal Management Systems?**
The building block approach may be the way to integrate federal government management systems into one, efficient decision-making system. (Oct.)
**Forest W. Horton, Jr.**

**Communications Directories**
Here is a case history that shows how a good up-to-date internal telephone directory can save a large company the salaries of two operators. (Sept.)
**Thomas W. Kirkham**

**Counter Conduct In Mechanical Systems**
Here are some steps management can take to cope with the people problems that are encountered during the design of a management information system. (Dec.)
**Dr. C. Warren Neel**

**Decision Table For Engaging A Consultant**
When should a company hire a consultant to help with systems or data processing problems? A decision table has the answer. (July)
**J. W. Haslett**

**Gaining Acceptance Of Change**
It is the systems analyst who must know how to sell change for he is the innovator for the design and implementation of change. (May)
**N. Louis Senensieb**

**Human Factor In Management Systems, The**
People are the most important systems element. The author tells how to include this people factor in management systems. (Nov.)
**Dr. M. Scott Myers**

**Linear Organization Chart Clears Away Confusion**
Here is a method that helps management clearly define responsibilities by relating key men, key tasks, and degree of responsibility. (Aug.)
**Robert G. Murdick, Ph.D., Joel E. Ross, Ph.D., and Jack E. Westmoreland**

**Management Of Work, The**
The author tells why the company organization, as shown by the organization chart, with its inaccuracies should be replaced by the work group. (Sept.)
**Dorothy Anne Seese**

**Managing Human Resources**
One of the modern manager's biggest problems is to find the right way to control human effort. The author gives some proven methods. (Dec.)
**Dirk C. Prather**

**Systems Analyst In The Terminal Access Environment, The**
The systems analyst must understand user reaction to data terminals and be able to respond to the challenges some of these reactions present. (Mar.)
**Dorothy Anne Seese**

**Systems Management As A Creative Process**
The problem for the systems manager is to impose the necessary structure in his organization without stifling creativity. (Jan.)
**Eugene J. Koprowski**

**Systems Organization And Strategy**
Identifying the systems department with data processing is a mistake because computer systems are only one aspect of the systems function. (Nov.)
**Curtis Rice**

**Why Plan For Systems Development?**
Management is going to expect the EDP organization to have a long range plan that defines the need and justifies the investment. (June)
**Lawrence J. Clarke**

## Management Principles and Philosophy

**Building Block Approach: Key To Federal Management Systems?**
The building block approach may be the way to integrate federal government management systems into one, efficient decision-making system. (Oct.)
**Forest W. Horton, Jr.**

**Can A Good Theory Pay Off For Management?**
The gap between the management throrists and the management practitioners should not widen or the contributions of each will be lost. (Sept.)
**Glenn H. Varney**

**Closing The Gap Between EDP And The User**
Applying a few basic concepts of organization and work management will close the communications gap between data processing and the user. (Nov.)
**John L. Nunn, Jr.**

**General Hierarchy Of Company Philosophy, A**
What is needed is a structured outline of the intangible aspects of decision making that often make up the philosophy of a company. (Feb.)
**Donald D. Martin**

**Human Factor In Management Systems, The**
People are the most important systems element. The author tells how to include this people factor in management systems. (Nov.)
**Dr. M. Scott Myers**

**Management Of Work, The**
The author tells why the company organization, as shown by the organization chart, with its inaccuracies should be replaced by the work group. (Sept.)
**Dorothy Anne Seese**

**Philosophy Of Systems Management, A**
Systems Management can produce a better informed decision-making environment by emphasizing a coordinated flow of information. (July)
**Lloyd L. Byars, Ph.D.**

**Planning For Information Systems**
EDP systems are often planned for a specific area. Information systems, though, should be made an integral part of the business. (Sept.)
**Albert F. Collard**

**Satisfying And Motivating The Systems Analyst**
The author tells why systems personnel are motivated by achievement based on the results of a survey on motivation and satisfaction. (May)
**Beaufort B. Longest, Jr.**

**Toward A Systems Theory Of The Firm**
To develop a systems theory of the firm, managers first must identify the boundaries and restraints imposed upon the firm. (Feb.)
**August William Smith**

## Selection and Training of Systems Personnel

**Activities And Education Of Systems Analysts, The**
Here is a portion of a research study to determine what activities systems analysts feel are important to their jobs. (Jan.)
**Ethel H. Shrout**

**Career Paths In Systems And Data Processing**
The author discusses some of the obstacles that lie in the path of the systems professional on his road to top management of a company. (June)
**Donald Kaye**

**How To Solve Student Registration Problems**
A teleprocessing system may hold the solution for the problem of increasing student enrollments that has overburdened the registration process. (May)
**Dr. Donald L. Mays and Dennis L. Kramer**

**Satisfying And Motivating The Systems Analyst**
The author tells why systems personnel are motivated by achievement based on the results of a survey on motivation and satisfaction. (May)
**Beaufort B. Longest, Jr.**

**Systems Course For Prison Inmates, A**
A prison rehabilitation center for teaching computer technology has developed into a working data processing service center. (July)
**William Harris**

**Trends In Systems Education**
Here are the results of a research study to determine to what extent the EDP curriculums of universities are keeping pace with industry needs. (Dec.)
**Dr. Albert P. Ameiss and Dr. Warren A. Thompson**

**Unemployment In Wonderland**
Now is a good time to shop in the programmer market, but one must know what he needs and how to tell the good from the bad. (July)
**Tom Evslin**

**University Information Systems In The Federal Republic Of Germany**
The authors describe a university information system that will give the German Government the data for new construction and reforms. (Mar.)
**Ehrhard Mundhenke, Ph.D. and Harry M. Sneed**

## Information Collection, Storage Retrieval, Forms & Records Management

**Achieving Proper Program Documentation**
Proper documentation is hard to control. Here is a procedure that will help produce specific standards and proper program documentation. (Nov.)
**James C. Tatman**

**Adapting The Use Of Documentation**
This case history shows how a Blue Cross group provided a basis for improving future systems by documenting present ones. (May)
**Glorino M. Navalta**

**Data, Information And Decision Making**
Based on a decision making pyramid, the author develops a method for approaching data gathering, information development and information flow. (June)
**Fred C. Stults**

**Designing A Paperwork System To Achieve Its Function**
This systems design process emphasized the best possible way to reach an objective and saved 600 clerical hours a year. (Apr.)
**William C. Kulp**

**Hard Look At Software Documentation**
To establish a basis for overall improvement, the author proposes a set of criteria for evaluating programming documentation. (June)
**Richard E. Gunderman**

**Harnessing The Information Explosion**
This article is a case history that shows how one company used a reports survey to reduce the cost and number of reports. (Dec.)
**Ned W. Brenizer**

**Management Audit: Organizational Guidance System, The**
The management audit can be an effective tool to give the manager an objective look at how his operations conform to company policy. (Dec.)
**Olin C. Snellgrove**

**Managing The Inventory Investment**
When money is invested in inventories, it is essential that management plan and control the physical and financial aspects of that inventory. (July)
**Robert D. Landel, Ph.D.**

**New Directions For Reports Management**
Support of a reports management program is easier to get if the information user is told what he needs instead of what he does not need. (Aug.)
**Albert W. Short, Jr.**

**Robert D. Landel, Ph.D.**

**New Directions For Reports Management**
Support of a reports management program is easier to get if the information user is told what he needs instead of what he does not need. (Aug.)
**Albert W. Short, Jr.**

## Automatic Data Processing, Including Hardware, Software, and Applications

**Computers Can Reduce Management Risks**
This article shows how the computer can be used in daily decision making to help arrive at solutions to non-routine problems. (Dec.)
**Dr. Hugh J. Watson**

**Convention Solicitation System, A**
A newly-constructed Concert-Exhibition Hall prompted the Convention Bureau of Wichita to design a system to solicit convention business. (Feb.)
**D. R. Epley**

**Data Base Controls Computer Operations**
To obtain more efficient production systems for computer operations, data processing systems analysts and managers must find a way to communicate. (Feb.)
**Maurice Babb**

**Facilities Management, An Approach To Successful Data Processing Management**
With today's technology the management of data processing departments is one of the most difficult objectives that can be undertaken. (Jan.)
**Eugene Bellin**

**Five Keys To Effective Computer Management**
Here are the management programs and techniques that are necessary to the economical and efficient use of third generation computers. (Oct.)
**Alfred S. Sharlip**

**Let The Computer Buyer Beware**
Costly mistakes in computer selection and equipment usage can be made when one is inexperienced in the technical field of computer systems. (Nov.)
**Dr. Richard A. Kaimann and Paul M. Drewek**

**Managing The Machine Society**
Modern data processing techniques can help our national leadership select the timely, accurate and relevant information it vitally needs. (Apr.)
**Robert L. Chartrand**

**Myths Of Automated Management Systems**
Many myths have accompanied the rapidly increasing use of automated management systems. The author takes a shot at some of them. (Mar.)
**Edward M. Tolliver**

**Needed: A New Profession**
Fundamental problems of communicating system objectives and needs often cause disappointments in automated data systems. (June)
**Charles L. Long**

**System For Periodical Subscriptions, A**
Here is a system developed by a research laboratory to control the costs and maintain the efficiency of ordering periodicals. (Feb.)
**Paul F. Fritton**

**Technique For Systems Analysis And Design, A**
Here is a new technique developed to help the systems analyst analytically evaluate and solve systems problems. (May)
**Miles H. Hudson**

**Test Time Analysis: An EDP Management Tool**
Test time analysis is one tool data processing management can use to effectively manage the data processing department. (Jan.)
**Paul S. Benoit**

**Toward Better Management Of People**
Here is an approach to the management of people problem that can save data processing management time and money. (Oct.)
**Paul S. Benoit**

## Management Sciences

**Can A Good Theory Pay Off For Management?**
The gap between the management theorists and the management practitioners should not widen or the contributions of each will be lost. (Sept.)
**Glenn H. Varney**

**Digital Simulation Considerations**
The purpose of model building is to gain insight, to test, and to foresee the effects of decisions. The author gives some basic techniques. (June)
**Bernard J. Schroer**

**Discussion Of The Mathematical And Simulation Approach To Queuing Theory**
The author contrasts a mathematical approach with a simulation approach to solve a typical waiting line problem. (Jan.)
**Robert V. De Marco**

**A Model For A Housing Problem**
The author develops a model, which can be applied to other problems, to forecast and evaluate the costs of three types of housing construction. (Dec.)
**Terrance W. Bache**

**Multiple Regression Techniques For Estimating Computer Programming Costs**
The author uses multiple regression techniques to help estimate the cost and time necessary for developing computer programs. (Feb.)
**John B. Gayle, Ph.D.**

**Systems Engineering And Management: Operating Framework Of The Future**
To obtain positive results from new management techniques and sciences, the firm's decision-making and operating frameworks must be flexible. (Aug.)
**Donald S. Feigenbaum**

**Systems Approach To Materials Management**
Here is why some companies do and some do not use the materials management function to centralize materials responsibility. (May)
**G. J. Zenz, Ph.D.**

**Urban Planning: Ripe For Systems Analysis**
The urban system poses many problems for the analyst, but existing problem-solving models can be used for urban planning. (Jan.)
**Martin I. Taft, Ph.D., and Jerry L. Pollak**

## Management Information Systems

**Building A Successful MIS**
This case history shows how one company successfully developed an MIS by using the building blocks it already had in place. (Apr.)
**Mary Jane O'Black**

**Establishing A Government IMS**
Establishing a government IMS is similar to any other system design process, but there are some peculiar problems that must be considered. (June)
**Corydon D. Hurtado**

**Human Dilemmas Of MIS, The**
The systems designer must face a number of attacks upon his profession. The author tells why this problem exists and how it can be met. (Aug.)
**Walter L. Balk, Ph.D.**

**MIS Or IMS?**
What is the difference between MIS and IMS? Here are some guidelines to help the potential user choose the right system. (Jan.)
**William G. Waites**

**New Approach To Management Information Systems—Part I, A**
The author discusses an approach to management information systems that considers the day-to-day operation of a business. (July)
**Charanjit S. Lohara**

**New Approach To Management Information Systems—Part II, A**
Here is the final part of a two-part article that considers the day-to-day operation of a business in its approach to MIS. (Aug.)
**Charanjit S. Lohara**

**Planning For Information Systems**
EDP systems are often planned for a specific area. Information systems, though, should be made an integral part of the business. (Sept.)
**Albert F. Collard**

**University Information Systems In The Federal Republic Of Germany**
The authors describe a university information system that will give the German Government the data for new construction and reforms. (Mar.)
**Ehrhard Mundhenke, Ph.D. and Harry M. Sneed**

## Space and Facility Planning

**Centralizing Computer Facilities**
Here are some reasons for centralized EDP along with some hardware, software and physical facility considerations when centralizing. (June)
**J. Bush Jones**

**Systems Approach To Post Office Improvement**
The systems approach could be the answer to improved management and better construction of post office facilities. (May)
**Manohar Singh**

## Work Improvement, Measurement and Simplification

**Decision Table For Engaging A Consultant**
When should a company hire a consultant to help with systems or data processing problems? A decision table has the answer. (July)
**J. W. Haslett**

**Manpower Control**
The degree to which one can control any work force depends upon one's skill in interpreting data and in finding problem causes. (Mar.)
**Bruce R. Shaw**

**Principles Of Short-Interval Scheduling**
If used properly, short-interval scheduling can instill in clerks and supervisors an urgency to get the job done, thereby increasing production. (Mar.)
**Martin R. Smith**

**Proxemics As A Work Standard Influence**
When determining work standards, proxemics should be considered as a factor that can increase or decrease work production. (Nov.)
**Donald D. Martin and Charles Johnston**

**Three Views Of Work Improvement**
Which is the best work improvement program for doing a job better? The author discusses three ways and offers some solutions. (Oct.)
**Herbert J. Larson**

**Work Measurement—Part I: The Concept And Need**
Part I of this article explains the roles played by work measurement and methods study in the well managed organization. (Sept.)
**Dr. Vincent G. Reuter**

**Work Measurement: Part II, Usage And Trends**
The results of three special studies on the use of work measurement are compared against the results of several other studies. (Oct.)
**Dr. Vincent G. Reuter**

## Graphic Presentation and Reports

**Administrative Systems Design And Communication**
Here is a solution to making full use of flow charts as a primary means of communication by the proper use of prose and graphics. (Aug.)
**F. William Fleischhauer**

**Critical Activities Network, The**
The right planning and controlling technique can help the project manager tell immediately what effect any activity has on the overall project. (Aug.)
**George J. Menzel**

**New Directions For Reports Management**
Support of a reports management program is easier to get if the information user is told what he needs instead of what he does not need. (Aug.)
**Albert W. Short, Jr.**

**Technique Of Integrated Charting, The**
This case history shows how a very sophisticated integrated charting system can be an essential part of management by objectives. (Nov.)
**John A. Murphy**

## Specific Systems Case Histories

**Adapting The Use Of Documentation**
This case history shows how a Blue Cross group provided a basis for improving future systems by documenting present ones. (May)
**Glorino M. Navalta**

**Computerized Assistance For The Aging**
A county government is applying computer technology to handle the problems that come with an increase in the number of elderly citizens. (Apr.)
**David A. Lewis**

**The Financial Services Conglomerate: An Organizational Approach**
This is the approach taken by Canada's Northwest Territories Treasury Dept. in designing modern operating systems in accounting and supply. (Feb.)
**S. A. Huesing**

**How To Implement A Shared System Teleprocessing Network**
Here is a case history that shows how a hospital teleprocessing system was developed in parallel for both administrative and clinical data. (Apr.)
**Richard J. Brewer, et al.**

**How To Solve Student Registration Problems**
A teleprocessing system may hold the solution for the problem of increasing student enrollments that has overburdened the registration process. (May)
**Dr. Donald L. Mays and Dennis L. Kramer**

**Reviewing A Program Budgeting System In A Municipality**
A California city has found a way to achieve greater resource allocation at the local level through styled program budgeting. (Apr.)
**Robert J. Byron**

**Systems Approach To Water Pollution Abatement**
A systems approach to the problem of water pollution may be just the solution to good stream quality at a moderate cost. (Mar.)
**Austin H. Montgomery**
